What ClassTablet Is

ClassTablet is a Bangladesh-first edtech platform that replaces the spreadsheets, WhatsApp groups, paper registers and disconnected apps that classrooms use today — with a single, modern, AI-assisted system for teachers, students, parents, and institutions.

Built in Dhaka and shipped at app.classtablet.com, the platform is engineered specifically for how education actually works in Bangladesh: bilingual (English + Bangla), BDT-priced, integrated with bKash, Nagad, Rocket and SSLCommerz, wired into MiMSMS for SMS, and aware of the local academic structure (Primary, JSC, SSC, HSC, Madrasa, English Medium, Coaching, Vocational, Undergraduate).

Who It Serves

ClassTablet is intentionally multi-sided. Five distinct personas use the same platform, each with a dashboard designed for what they actually do every day:

- **Independent Teachers & Tutors** — run their classrooms, take attendance, set assessments, communicate with parents, get paid.
- **Students** — study, submit assignments, take quizzes, use AI to learn, track their own progress.
- **Parents** — see real-time grades, attendance, and deadlines for every child, message teachers directly, pay tuition.
- **Institution Owners** — operate a white-labeled portal for their school, coaching center, or madrasah — with their own brand, domain, and authentication policies.
- **Institution Admins** — provision teachers and students in bulk, manage classrooms across the institution, audit everything, and report to ownership.

What Makes It Different

BANGLADESH-FIRST BDT pricing, bKash/Nagad/Rocket/cards via SSLCommerz, MiMSMS for SMS, Bangla + English UI, Bangladeshi academic levels and boards baked into the data model.

WHITE-LABEL MULTI-TENANT Any institution can run ClassTablet under its own brand, with its own domain, colors, logo, and login methods (student ID + OTP, password, or institutional SSO).

FREE FOR EVERYONE WHO LEARNS Students and parents never pay. Teachers start free with 5 students; institutions get pay-as-you-go pricing that scales with active learners — not seats.

BUILT ON REAL SOFTWARE Type-safe full-stack TypeScript, PostgreSQL, AWS ECS Fargate, AWS IVS for live streaming, OpenAI + Google Gemini for AI, Sentry-monitored, Arcjet-protected. This is production software, not a prototype.

The Problem We Are Solving

Teachers buried in admin. Parents kept in the dark. Students missing deadlines nobody warned them about. Institutions stitching reports from five spreadsheets. The system isn't broken — it was just never designed to connect.

What classroom life looks like today in Bangladesh

- **Chaos in a spreadsheet** — Every teacher uses a different system — paper register, Excel, Google Sheets, WhatsApp. By Friday, nobody knows what's actually going on.
- **Parents are the last to know** — Updates wait for the next parent-teacher meeting. By the time a failing grade arrives in a report card, nothing can be changed.
- **Students fly blind** — Assignments are scattered across WhatsApp groups, Messenger DMs, and verbal announcements. Something always slips through.
- **Tool sprawl for institutions** — Coaching centers and schools use 5–10 disconnected tools — attendance app, grade sheet, fee tracker, WhatsApp group, paper notice, Zoom link. Nothing talks to anything else.
- **Payment chaos** — Tuition collection happens via bKash personal numbers with no invoicing, no record, no follow-up — leading to disputes and lost revenue.

The cost of this status quo

Across thousands of conversations with Bangladeshi teachers, tutors, parents and school administrators, the same costs show up again and again:

Stakeholder	What it costs them today
Teachers	8–15 hours/week on attendance, grading, fee follow-up, and parent messages — work that doesn't help anyone learn.
Students	Missed deadlines, surprise tests, no clear picture of where they stand until results arrive.
Parents	No visibility until report card day. Constant WhatsApp guessing. Anxiety about whether fees were even received.
Coaching centers	No standardized data, no school-wide reports, high churn because the operation feels disorganized to parents.

Schools

Manual EIIN reporting, fragmented compliance, no real audit trail, IT overhead from juggling vendors.

“Attendance in one tap. Assignments grade themselves. Parents get updates I never had to send. I just teach now.”

— Md. Arif Hasan, Math Teacher

Bangladesh Market Reality (2026)

ClassTablet exists because the Bangladeshi education market has structural conditions that no foreign LMS was designed for.

The structural numbers

Indicator	Reality in Bangladesh	What it means for ClassTablet
Student-teacher ratio	≈ 1 : 35 average; 1 : 60–70 common in secondary schools	Teachers physically cannot give individual feedback without software help.
Vacant secondary teaching posts	≈ 60,000+ unfilled across government grant-receiving schools and colleges	Existing teachers are overloaded — admin automation is a survival need, not a luxury.
Teachers qualified in subject	Only ~55% of secondary teachers; <50% of math teachers studied math at college	AI-assisted lesson planning, quiz generation, and study help raise the floor of what every teacher can deliver.
Reliance on private tutoring	More than 50% of secondary students use coaching centers or private tutors	Coaching centers and tutors are the real service layer — and the persona ClassTablet is built for first.
WhatsApp as parent channel	≈ 90% of parent communication happens on WhatsApp with no audit trail	Direct in-app messaging, SMS fallback (MiMSMS), and structured notifications replace lossy chat.
Mobile money penetration	bKash, Nagad and Rocket dominate consumer payments	Built-in SSLCommerz integration for tuition collection and platform billing — no foreign card requirement.

Specific local conditions ClassTablet is built around

- **Currency** — BDT-native pricing and invoicing (₹ rupee-style platforms get rejected immediately).
- **Language** — Bangla and English UI everywhere, with Bangla academic vocabulary and curriculum levels (Primary, JSC, SSC, HSC, Higher Secondary, Madrasha streams).
- **Connectivity** — Bangladeshi phone-number formats, BD SMS provider (MiMSMS), cookie-light flows that work on slow 3G.

- **Academic structure** — EIIN (institutional IDs), NCTB-aligned subject categories, board-aware exam structures.
- **Devices** — PWA-first (works offline, installable on the home screen), so students with cheap Android phones get the full experience without paying for an app store.

Where Existing LMS Platforms Fall Short

There are LMS products in the Bangladesh market today — but none of them sits in the same square ClassTablet does.

The current alternatives, honestly

Existing player	What they do well	What they leave on the table
10 Minute School	Massive content library, exam prep videos, premium skill courses for grades 1–12.	Pure content + course store. Does not run the teacher's actual classroom — no attendance, no parent portal, no per-student grade book, no fee tracking.
Shikho	Strong production, K-12 video courses with bKash cashback partnerships.	Same content-product model. Built for individual self-study, not for the teacher who runs a batch of 30 students every Tuesday.
ShikkhaPlus / Edufy / Sheba Shikkha	Traditional ERP-style school management — admissions, fees, exam results, biometric attendance.	Built for a principal in an admin office. Heavy, form-driven, weak teacher UX, no AI, no real student experience, parent module is an afterthought.
Google Classroom	Free, familiar, integrates with Google Workspace.	Generic global product. No BDT billing, no SSLCommerz, no SMS, no parent module, no Bangla UX, no fee collection, no white-label.
WhatsApp + Excel + paper	Free, universal, zero learning curve.	No structure, no audit trail, no analytics, no parent dashboard, no scaling, lost messages, no way to charge tuition cleanly.

What no one in Bangladesh offers today (and ClassTablet does)

- **One platform, three audiences** — A single platform that runs the classroom AND gives students AI study tools AND gives parents real-time visibility AND collects tuition — instead of forcing people to bolt three vendors together.
- **Pay-as-you-grow billing** — Per-active-student pricing (₹10/student/month) instead of per-seat licenses. Teachers don't pay for inactive accounts.

- **True white-label tenancy** — Schools and coaching centers can run ClassTablet on their own domain, with their own logo, colors and auth methods. Their parents see the school's brand, not ours.
- **Honest AI integration** — Generates personalized quizzes, flashcards, and explanations for students. Generates lesson plans and questions for teachers. With Bangla support — including handwriting recognition via Gemini Vision.
- **Built-in live streaming** — AWS IVS-powered live classes with chat and recording, as a first-class part of every classroom — not a third-party Zoom link pasted in a description.
- **Multi-channel notifications** — Push notifications, SMS, email, in-app and WhatsApp — with priority levels, grouping, and a digest engine that won't spam parents.
- **SSLCommerz billing both ways** — Two-level payment system: students pay teachers via SSLCommerz; ClassTablet bills teachers/institutions on tiered subscriptions. Both flows run on the same Bangladeshi rails.

ClassTablet Feature Universe

ClassTablet ships as one product with deep features across ten functional pillars. The list below is what is in the production codebase today — not a roadmap.

Classroom & Section Management

- Create classrooms with cover image, banner, theme color, and curated icon
- Self-serve join via class code (anyone / code / approval policies)
- Sections (sub-classrooms) for batches inside one offering
- Multi-teacher classrooms with role-based access
- Recurring weekly schedules with per-slot teacher and subject assignment
- Class representative role for student-led coordination
- Status lifecycle: draft → published → active → completed → archived
- Hierarchical subject catalog (NCTB-aligned, with Bangla names)

Attendance

- One-tap attendance for the entire class
- Per-student status: present, absent, late, excused
- Calendar view, today view, per-student timeline
- Immutable audit log of every change (who, when, why)
- Absence triggers automatic parent alert (in-app + SMS + push)
- Google Meet participation tracking with email-based fuzzy matching

Assignments & Quizzes

- Homework, projects, exams, practice, worksheets
- Rich-text editor with attachments and rubric grading
- Quizzes with MCQ, multi-select, true/false, fill-blank, matching, ordering, short answer, essay
- Question bank with difficulty levels
- AI quiz generation from a topic or uploaded material
- Auto-grading for objective questions; rubric-based for subjective
- Late submission policy + resubmit-requested workflow
- Per-quiz proctoring and scheduling settings

Live Streaming & Sessions

- AWS IVS low-latency live video built into every classroom
- Live chat room synced to the IVS channel
- Recording with viewer metrics (peak, total, average watch time)
- Google Meet, Zoom, Jitsi, or built-in player as join options
- Session reminders via SMS + push + email

AI Study & Teaching Tools

- AI Study Helper for students (GPT-4o-mini)
- Voice Teacher (audio Q&A)
- Lesson planner for teachers
- Content summarizer
- Bangla + English handwriting recognition via Gemini Vision (math, essays, mixed scripts)
- Adaptive learning paths and module recommendations
- Spaced-repetition flashcards (SM-2 algorithm)
- Token-metered AI credits with monthly quotas + paid top-ups

Payments, Invoicing & Billing

- Tuition collection via bKash, Nagad, Rocket, bank transfer and cards through SSLCommerz
- PDF invoices generated server-side (@react-pdf/renderer)
- Recurring subscriptions, one-time payments, admission fees
- Coupons, refunds, payouts, payout accounts
- Two-level billing: students pay teachers; ClassTablet bills teachers on Free / Starter / PAYG / Enterprise tiers
- AI credit packs as paid add-ons (50 / 200 / 500 questions)
- Promo codes (percentage, flat, free credits, free trial)

Communication

- In-app direct, group, and support conversations
- Threaded messages with read receipts
- Class-scoped announcements with read tracking and priority levels
- Multi-channel notifications: in-app, email, push, SMS, WhatsApp
- Digest engine that batches low-priority pings every 15 minutes
- Web Push notifications via VAPID for the PWA

Parent Experience

- Many-to-many parent ↔ student linkage
- Per-child notification and permission granularity

- Real-time view of attendance, grades, deadlines, fees
- Direct messaging with each teacher
- Tuition payment history and pending invoices
- Parent alert preferences per channel and event type

Gamification & Progress

- XP points and levels
- Achievement badges (bronze → platinum tiers)
- Daily study streaks with freeze mechanic
- Global and per-subject leaderboards
- Certificates (completion, achievement, participation, excellence) with QR verification

Institution / White-label Tenancy

- Custom domain, logo, favicon, light + dark logo, brand colors
- EIIN (institutional ID) field for compliance
- Allowed authentication methods configurable per tenant
- Institutional login: student ID → OTP or password (own auth flow)
- Bulk member provisioning (single + CSV import with validation)
- Tenant admin sub-app: people, classrooms, branding, auth, Google integration
- Org-scoped Google Workspace integration for Meet provisioning
- Soft-delete + trash + scheduled purge
- Immutable audit log across every admin action

How Students Experience ClassTablet

Students are first-class citizens, not after-thoughts. ClassTablet is free for students forever, with the same AI tools, dashboards, and progress tracking as anyone else.

First 5 minutes

1. Student opens app.classtablet.com (or installs the PWA to their home screen).
2. Signs in with Google, email, or institutional student ID.
3. Enters the class code their teacher shared, or accepts the join request approval.
4. Lands on a dashboard showing today's classes, pending assignments, upcoming deadlines, and unread announcements.
5. Done — no IT setup, no CSV, no install fee.

Daily life on ClassTablet

- **See exactly what's happening today** — Today's classes, timetable for the week, calendar of events.
- **Submit assignments online** — Upload, type, attach files, see grade and rubric feedback the moment the teacher posts it.
- **Take quizzes** — Run timed practice quizzes, see correct answers and explanations after submission, retake when allowed.
- **Use the AI study helper** — Generate flashcards from any topic in seconds. Spaced repetition decides what to show next.
- **Run study sessions** — Timed Pomodoro-style focus sessions with progress tracking — see exactly how many minutes you've put in.
- **Message classmates and teachers** — Direct chat with teachers and classmates. Group conversations per classroom. Read receipts.
- **Earn points and badges** — XP for every assignment, badges for milestones, streaks for daily study, leaderboards if you opt in.
- **Track your own progress** — Personal dashboard with grades, attendance, study minutes, and trend lines. Spot a slipping subject before the report card does.

How it benefits students

FREE, FOREVER Every AI tool, every quiz, every dashboard — at zero cost. No credit card, no trial, no degraded free tier.

EQUAL ACCESS TO AI A student in a village school gets the same AI tutor as a student in Dhaka. The platform doesn't care where you log in from.

SELF-DRIVEN LEARNING Students stop waiting for the teacher to tell them what's next. The dashboard shows them. AI explains the parts they don't get.

NO MORE LOST WORK No more 'I gave it to you in your hand' or 'WhatsApp deleted my submission'. Every assignment has a server-side audit trail.

“The AI tutor explained photosynthesis better than my textbook. Flashcards in 10 seconds. Two grades up in one term.”

— Samira Islam, Class 10 Student

How Teachers Experience ClassTablet

Teachers are the economic engine of ClassTablet. The experience is built around one promise: get your evenings back.

First 5 minutes

6. Teacher signs up at app.classtablet.com on the Free plan (no card).
7. Onboarding wizard collects subject expertise, levels taught, hourly/monthly rate (BDT), and language preference.
8. Creates first classroom — picks a subject, theme color, icon, schedule, language.
9. Shares the auto-generated class code with students (or imports them via CSV).
10. Live in under 5 minutes, with attendance, assignments, and a parent portal already wired up.

Daily workflow

- **Take attendance** — Mark the whole class present in one tap; correct exceptions individually. Parents are notified of absences automatically.
- **Set assignments and quizzes** — Create with rich text, attachments, rubrics. Auto-grade objective questions; grade subjective with the rubric grid.
- **Run a live class** — Click 'Go Live' on the classroom page. Students get push notifications. AWS IVS handles the stream and recording.
- **Use AI to prep faster** — Generate a 10-question quiz from any topic. Generate lesson plans. Generate explanations.
- **Communicate** — Send class-scoped announcements; chat directly with individual parents or students.
- **Collect tuition** — Track who has paid, who hasn't, send automatic reminders. Generate PDF invoices. Get paid via SSLCommerz.
- **See who needs help** — See per-classroom analytics: attendance trends, average grades, struggling students, top performers.

What ClassTablet replaces for a teacher

What teachers use today	What ClassTablet replaces it with
Paper register / Excel attendance	One-tap attendance + audit log + automatic parent alerts
WhatsApp groups for assignments	Structured assignment dashboard with deadlines and submissions

Manual grading + spreadsheets	Auto-graded quizzes + rubric-based subjective grading
Personal bKash number for fees	Branded SSLCommerz checkout + PDF invoices + reminders
Verbal announcements + WhatsApp	Class-scoped announcements with read tracking
Pen-and-paper lesson planning	AI-generated lesson plans, quizzes, flashcards
Zoom link copy-pasted into a chat	Built-in live streaming with chat and recording

How it benefits teachers

TIME BACK Hours of weekly admin (attendance, grading, fee follow-up, parent messages) collapse to minutes. Teach more, manage less.

MORE STUDENTS, NO EXTRA EFFORT Pay-as-you-go pricing (₹10/active student/month) means scaling from 5 to 50 students doesn't multiply your admin work — only your income.

PROFESSIONAL BRAND Even a solo home tutor gets a professional checkout, branded invoice, real-time parent dashboard, and live class streaming. Looks like a real coaching center.

AI WITHOUT THE HYPE AI generates quiz questions and lesson plans for you. It doesn't replace your teaching — it removes the busywork around it.

“ClassTablet cut my admin time in half. I used to spend evenings updating spreadsheets — now I just teach.”

— Sarah Mitchell, Math Teacher (8 years)

How Institution Owners Experience ClassTablet

An institution owner is the principal of a school, the founder of a coaching center, or the proprietor of a tutorial. They sign the contract, pay the bill, and own the brand. ClassTablet treats them as the tenant.

What they get on day one

- **A white-labeled portal** — Their school logo (light + dark), favicon, primary color, accent color — applied to the entire student and parent experience.
- **A custom domain** — Their portal lives at portal.theirschool.edu.bd (or any domain they own), not on classtabled.com.
- **Local academic structure** — EIIN field for compliance, board-aware academic levels, NCTB-aligned subject catalog.
- **Authentication policy** — Configure which sign-in methods their members can use: Google, email + password, phone + OTP, or institution-scoped student ID.
- **Google Meet provisioning** — Connect a Google Workspace tenant once; live classes auto-provision Google Meet links from the institution's own domain.
- **Their own payment account** — Per-organization SSLCommerz config so tuition flows into the institution's own merchant account, with ClassTablet taking only the platform fee.

What an owner sees in the dashboard

- **Institution KPIs** — Total active students, active teachers, monthly tuition collected, attendance rate trend.
- **Enrollment health** — Distribution across classrooms, levels, subjects.
- **Revenue health** — Overdue invoices, payment success rate, refund history.
- **Operational health** — Which teachers are active, which classrooms are at capacity, which students need attention.

How it benefits owners

MARGIN PROTECTION Replace 5–10 vendor subscriptions (attendance app, fee collector, WhatsApp Business, Zoom, accounting tool, etc.) with one platform priced per active student.

BRAND EQUITY Parents see the school's brand at every touch point, not ClassTablet's. The institution owns the relationship.

SCALE WITHOUT CHAOS Adding a 5th branch or doubling enrollment doesn't require new IT, new training, or new tools. The same platform scales from 30 to 3,000 students.

COMPLIANCE-READY Immutable audit logs, role-based access control, encrypted data at rest and in transit. Fits the kind of governance boards and regulators are starting to ask for.

Pricing model for institutions

Tier	Best for	Price	Limits
Free	Pilot / single batch	₹0	5 students, 1 classroom
Starter	Solo teacher / small batch	₹299/month	20 students, 5 classrooms, 100 AI credits
Pay As You Go	Coaching center / growing school	₹10/active student/month	Unlimited students & classrooms, 200 AI credits/mo
Enterprise	Multi-branch / large institution	Custom	Unlimited everything, dedicated success manager, SLA

"We replaced three separate tools with ClassTablet and our teachers actually started using it consistently. The school-wide analytics finally give us the picture we needed."

— Dr. Anika Rahman, Principal, Greenfield Academy

How Institution Admins Experience ClassTablet

Institution admins are the operations layer — the office manager, the academic coordinator, the IT person. They don't own the school, but they keep it running. ClassTablet gives them the dedicated Tenant Admin sub-app.

Their dashboard at /tenant-admin

- **People** — All members of the institution in one searchable list, filtered by role, status, classroom, level.
- **Single provisioning** — Provision a single member with email + role + classroom assignment.
- **Bulk import** — Upload a CSV/XLSX of students or teachers; system validates rows, shows errors, lets the admin fix and re-import.
- **Status management** — Suspend, graduate, or remove members. Status changes are audit-logged.
- **Classroom management** — All classrooms across the institution. Assign teachers, move students between batches, change schedules.
- **Teacher management** — Roster of all teachers, their classrooms, their active students, their performance.
- **Student management** — Students view with academic level, classrooms, guardian linkage.

Tenant settings

- **Branding** — Update the institution's logo, colors, favicon and domain in real time. Changes are visible to everyone in the institution within seconds.
- **Auth methods** — Toggle which auth methods the institution allows: Google, password, phone OTP, student ID. Configure OTP timing, password rules, session length.
- **Integrations** — Connect/disconnect the org-level Google Workspace integration. Used for Meet provisioning.
- **Audit log** — View every action across the institution: who created what, who changed what, when, from which IP.

How it benefits admins

NO MORE SPREADSHEET SHUTTLING Bulk import replaces hand-entry. CSV templates and validation reports turn a week of data work into an afternoon.

GRANULAR CONTROL WITHOUT IT Custom roles let an admin define exactly what each role can do — without writing code, calling support, or filing a ticket.

VISIBLE ACCOUNTABILITY Audit logs mean every action is traceable. Disputes get resolved with evidence, not memory.

STANDARDIZED TEACHER BEHAVIOR Because attendance, grading and parent comms all happen in one tool, every teacher in the institution produces comparable, exportable data — without being micromanaged.

How Parents Experience ClassTablet

Parents in Bangladesh today live on WhatsApp, hoping someone will tell them how their child is doing. ClassTablet replaces hope with a dashboard.

First 5 minutes

11. Parent receives an invitation link or enters their child's student ID.
12. Verifies via SMS OTP (MiSMS) or email.
13. Lands on a dashboard showing every linked child (many-to-many), with today's attendance, latest grades, upcoming deadlines, and pending fees.
14. Configures notification preferences per child and per channel — without installing a separate app.

What they get every day

- **Real-time attendance** — The moment a teacher marks attendance, parents see it. Absences trigger an immediate alert.
- **Real-time grades** — When a grade is posted, the parent's dashboard updates and a notification is sent.
- **Upcoming deadlines** — See every assignment, deadline, and submission status for each child.
- **Direct teacher messaging** — Direct, structured chat with each teacher. No more lost WhatsApp threads or unanswered phone calls.
- **Tuition payments** — Pay tuition through bKash, Nagad, Rocket, or card. See the entire payment history. Download invoices.
- **Progress trends** — Per-subject grade trends, attendance patterns, study minutes — across weeks and months.

How it benefits parents

ALWAYS FREE Parents never pay anything. The platform is free for every guardian, forever.

NO MORE REPORT-CARD SURPRISES Parents see slipping grades the same week they happen, not three months later when nothing can be changed.

ONE APP FOR EVERY CHILD Multiple children in different schools? They all roll up into one ClassTablet parent dashboard.

QUIET, NOT NOISY The notification engine batches low-priority pings into digests. Parents get the urgent stuff instantly and the routine stuff in a once-a-day summary.

“My daughter missed two classes and I knew the same day — not three months later on a report card.”

— Nasreen Akhter, Parent

Pricing & Business Model

Two principles drive the pricing: students and parents never pay; teachers and institutions pay only for what they use.

Plans

Plan	Monthly	Best for	Includes
Free	₹0	Solo tutors testing the waters	5 students · 1 classroom · attendance · grades · parent portal · email notifications
Starter	₹299	Growing private tutors / micro-batches	20 students · 5 classrooms · unlimited assessments · AI Study Helper · 100 AI credits/mo · offline PWA · schedule & calendar
Pay As You Go	₹10 / active student	Coaching centers and growing operations	Unlimited students · unlimited classrooms · advanced analytics · SMS notifications · 200 AI credits/mo · everything in Starter
Enterprise	Custom	Schools, multi-branch institutions	Custom branding · custom domain · priority support & SLA · dedicated account manager · custom integrations · API access · unlimited AI credits

AI Credits (top-ups)

Pack	Price	Per question
Starter Pack — 50 questions	₹29	₹0.58
Growth Pack — 200 questions	₹99	₹0.50
Pro Pack — 500 questions	₹199	₹0.40

Why this model works in Bangladesh

- **Free for the buyer's hardest sell** — Removes the upfront cost barrier. Tutors can prove value before they pay anything.
- **Pay-as-you-grow** — Means a tutor with 8 students pays ₹80/month — not a fixed ₹2,000 license. Costs scale with revenue.
- **Local payment methods** — bKash, Nagad, Rocket, bank transfer, cards — all via SSLCommerz. No foreign credit card requirement.
- **No lock-in** — No contracts, no cancellation fees, no enterprise minimum. Cancel any time, return to Free, keep your data.

Security, Privacy & Data Protection

Student data is sacred. ClassTablet is engineered with production-grade security from the ground up — not bolted on later.

What protects user data

- **Encryption** — All data encrypted at rest and in transit (TLS 1.2+, AES-256 at rest on AWS RDS).
- **Authentication** — better-auth as the session manager, with Google OAuth, TOTP 2FA, phone OTP, email OTP, and institution-scoped student-ID flows. Sessions stored in Redis with token rotation between every step.
- **Authorization** — Four-layer authorization model: capabilities matrix → custom roles → resource resolvers → tier entitlements. Every API endpoint goes through guards, not inline checks.
- **Application security** — Arcjet for bot protection, attack mitigation, and abuse detection. Nosecone for CSP headers. Upstash + Redis for rate limiting at the edge.
- **Immutable audit log** — Every admin action — create, update, delete, login, permission change, export, import — recorded with user, timestamp, IP, user agent, and a JSON diff.
- **Observability** — Sentry for real-time error tracking + performance monitoring. PostHog for product analytics. Microsoft Clarity for session replay. Google Analytics for traffic.
- **Data lifecycle** — Soft-delete by default; scheduled background cron purges hard-deleted data after the retention window.

Privacy stance

WE DO NOT SELL DATA Student and parent data is never sold, rented, or shared with advertisers. Period.

COMPLIANT WITH THE LAW Designed to comply with FERPA, GDPR principles, and Bangladesh's evolving Personal Data Protection framework.

ROLE-BASED VISIBILITY Teachers see only their students. Parents see only their children. Institutions see only their members. The platform enforces this at the database query level, not just the UI.

The Future We Are Building Toward

ClassTablet is not just a productivity tool. It's the foundation for how education will be delivered in Bangladesh — and across South Asia — over the next decade.

For students — the future is personalized

- **Adaptive learning** — AI tutors that already understand each student's weakest concepts and proactively suggest the next exercise. Continuous, low-stakes feedback instead of high-stakes annual exams.
- **Equal opportunity** — An English-medium student in Sylhet and a Bangla-medium student in Bogura get the same AI study power, on the same cheap Android phone.
- **A portable learning record** — Every assignment, badge, and certificate becomes a verifiable record students can carry forward — to a university, to an employer, to a scholarship committee.
- **Multi-modal submissions** — Bangla and English handwriting recognition means students can submit hand-written math, essays, and diagrams as photographs — and still get instant AI feedback.

For teachers — the future is leverage, not replacement

- **AI as co-pilot** — AI handles the busywork — quiz generation, grading first drafts, drafting parent updates — so the teacher spends time on the human work: explaining, motivating, challenging.
- **Scalable practices** — A skilled tutor can grow from 30 students to 300 without losing quality, because the platform absorbs the operational load.
- **A professional reputation** — Teachers build portfolios on ClassTablet — student outcomes, ratings, certifications — that travel with them across coaching centers, schools, and tutoring platforms.
- **A clear growth path** — From a coaching teacher with five SSC students to a registered school running on the same platform — no migration, no rebuild.

For institution owners — the future is operational excellence

- **Data-driven schools** — Move from gut-feel decisions to school-wide attendance, grade, and engagement dashboards updated in real time.
- **Multi-branch ready** — Open a second branch with one click — same software, same brand, same data backbone.
- **Marketplace economics** — An open marketplace for guest teachers, exam packs, and skill courses that institutions can offer to their students through the same portal.
- **Benchmarking** — Anonymized, aggregated insights into how students at the institution perform versus comparable institutions — useful for parents, governance boards, and ranking improvement.

For institution admins — the future is autonomy

- **Open APIs** — Sync any external system (existing student database, biometric attendance terminals, accounting software) via official APIs.
- **Custom roles** — Define exactly which roles can do what — no need to ask the platform to add a feature for every institutional policy.
- **Automated compliance** — Reports for boards, regulators, EIIN audits — generated from a single source of truth, on demand, with one click.

For Bangladesh — the future is closing the learning gap

1 : 35 → 1 : 1 AI study helpers give every student something approaching one-to-one tutoring — without needing 60,000 more teachers in the workforce.

SHADOW EDUCATION BECOMES LEGITIMATE INFRASTRUCTURE The 50%+ of secondary students relying on coaching get a professional, accountable, transparent platform — instead of unstructured WhatsApp groups and personal bKash transfers.

PARENTS BECOME REAL PARTNERS IN EDUCATION When parents see what's happening every day, they can support learning at home — not just chase report cards.

AN EXPORT-READY EDTECH CATEGORY A platform built for the toughest market — multilingual, low-bandwidth, cash-sensitive, mobile-money native — is ready for Pakistan, India, Indonesia, Egypt, Nigeria. Bangladesh becomes the launchpad.

Platform Snapshot

A factual snapshot of the production codebase as of this document.

Engineering surface area

Layer	Detail
Apps	Dashboard (app.classtablet.com), Marketing site (classtablet.com), REST API (api.classtablet.com), Docs site, Email template server, Expo mobile app
Database	PostgreSQL · 100+ tables across 40 schema files · 60+ enums · Drizzle ORM
Services	48 singleton service classes covering every business domain
Contracts	53 Zod v4 schema files — single source of truth for types and validation
Authentication	better-auth + plugins (admin, organization, twoFactor, phoneNumber, emailOTP) + custom institutional flow
Live Streaming	AWS IVS channel per classroom + chat room + recording
